

Information Management for Automated Demand Response in Large Facilities

Mary Ann Piette
Lawrence Berkeley National Laboratory
Demand Response Research Center

Demand Response R&D Symposium November 30, 2004 drrc.lbl.gov/autodr2

Project Overview

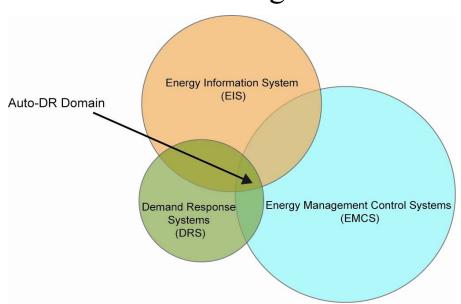

Goal: Evaluate feasibility of Automated DR hardware & software systems in large facilities

- Can control & communications systems receive signals & execute automated shedding?
- Control strategies for max load sheds & min service loss?

R&D Team: LBNL, Infotility, Shockman Consulting

2003 Automated-DR Sites

Albertsons – East 9th St. Oakland Engagenet

Bank of America – Concord Technology Center Webgen

General Services Admin - Oakland Fed. Building BACnet Reader

Roche Palo Alto – Office and Cafeteria
Tridium

Univ. of Calif. Santa Barbara – Library

Itron Silicon Energy

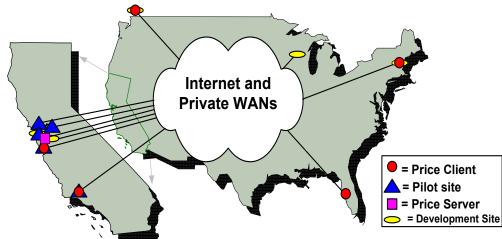

CALIFORNIA ENERGY COMMISSION

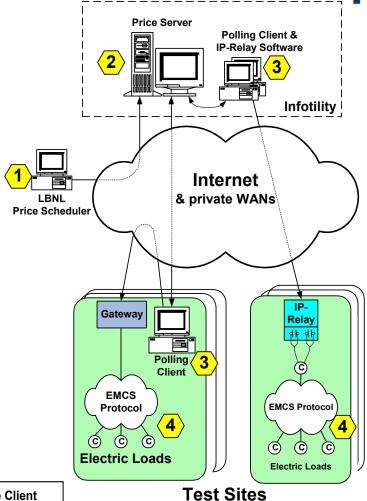

Auto-DR System Communications

- 1. LBNL defines price schedule
- 2. Price published on XML server
- 3. Clients request price from server every minute & send shed commands
- 4. EMCS carries out shed

Methods: 2003 and 2004 Tests

Field Tests

- Recruit, define strategies & measurement (detailed electricity, temperature, and trend-log analysis)
- 2003: 5 buildings, 1.5 million ft2
- 2004: 18 sites, 40 buildings, 10 million ft2

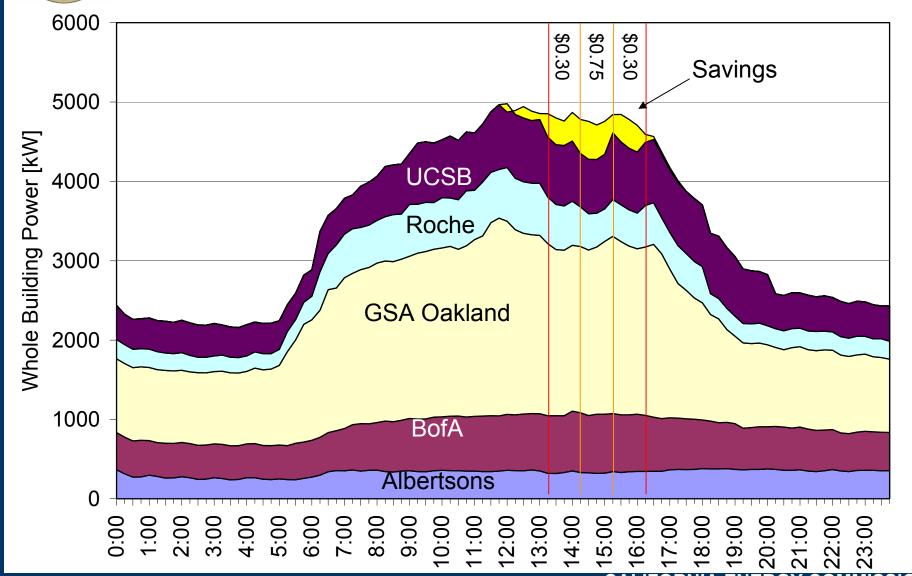

Connectivity

- Internet Gateway Internet to EMCS
- Internet Protocol Relay (IP Relay) –
 Internet controlled relay (2004 only)

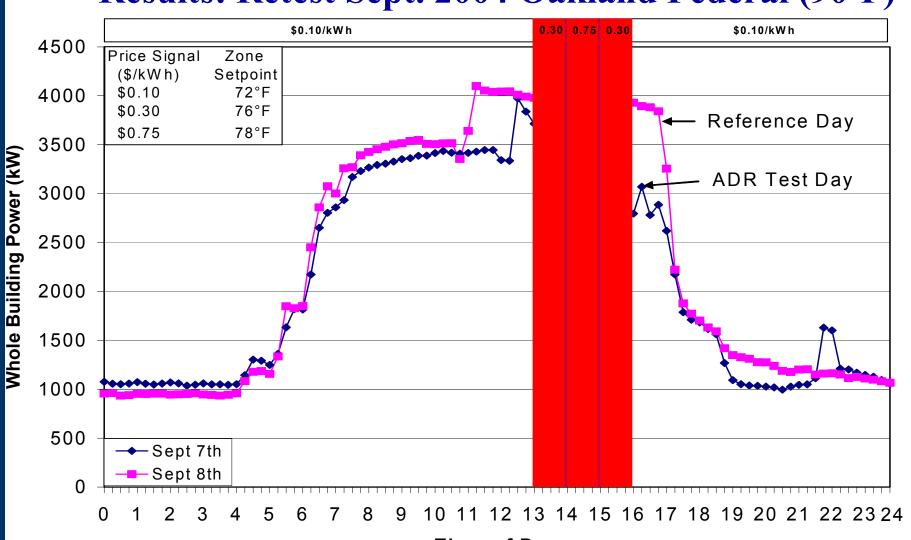

Results: 2nd Test November 2003

Results: Retest Sept. 2004 Oakland Federal (90°F)

	HVAC						Lighting, misc.									
DR Shed Strategies	Zone temperature increase	Supply air temp reset	Fan VFD limit	Fan off	Duct static pressure reset	Cooling valve close	Cooling fan-coil off	Direct chiller limit	Chilled water temp reset	Boiler pump (reheat) off	Electric humidifier off	Common area	Office lighting shed	Anti-sweat heater shed	Fountain pump off	Transfer pump off

Summit Center: Whole Building Power and Baseline

Summary and Next Steps

- * Automated DR is technically feasible
- * New knowledge needed to develop, operate & evaluate technology & strategies for DR
 - Rebound/recovery strategies needed
 - Link to daily efficiency clear to operators

* Future R&D

- Guides to DR shed strategies
- Scalable automation, security, latency, XML standards
- Pilot tests with utilities, peer to peer forums
- Economic evaluation tools/real-time simulation/ scenario analysis
